

Project Overview

UNO is a popular multiplier card game enjoyed by millions and can be played at dinner parties, family gathering, or outings with friends. We want to create UNO while implementing features the card game doesn't.

Features

User Features:

- Sign up
- Log In
- Log out
- Edit Profile

02

Game Features:

- Play UNO!
- View Instructions
- View Results
- Create or Join
- Turn-based game
- Chat globally & in-game

03

Required Features:

- Play with public link
- Creating & joining games with backend
- Store user data with database
- Handle API routes for front and backend communication

Technologies

We will use the required technologies: Render, <u>Node.is</u>, <u>Express.is</u>, PostgreSQL

As well as HTML & CSS and dependencies like NPM.

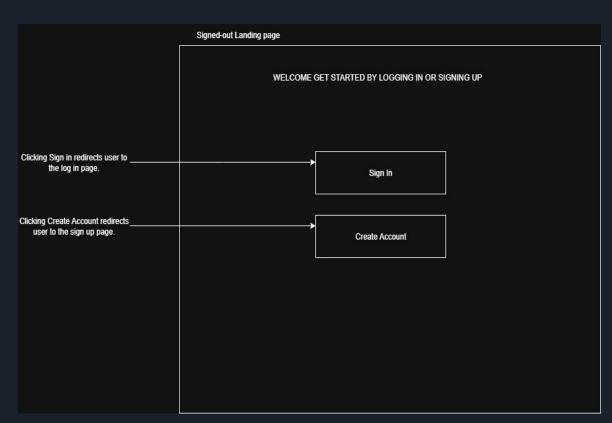

PostgreSQL

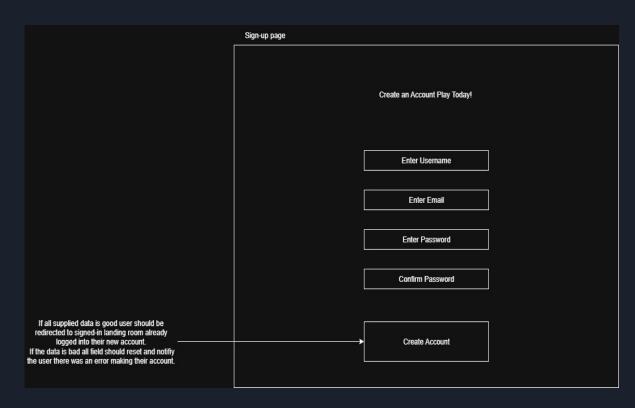

Wireframe: Signed-Out Landing Page

Starting screen everyone will see.

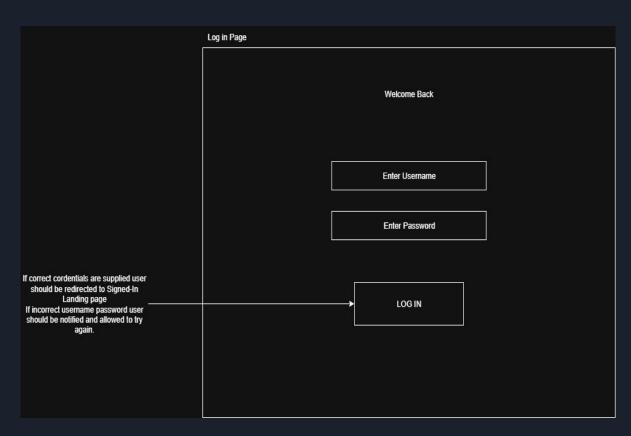

Wireframe: Sign Up

 Sign up page where new accounts are made

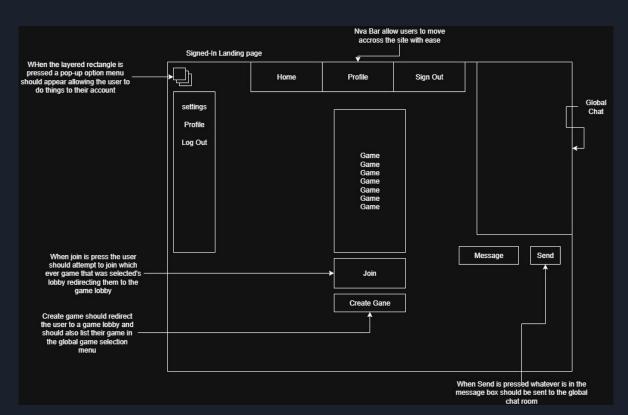

Wireframe: Log In
